

April 2021

Price Increase

Due to the rapid increase in steel costs worldwide, we will be forced to apply a 25% surcharge to the cost of our product. This surcharge will go into effect **April 14th, 2021**. The surcharge will be added to the subtotal before the labor charge is calculated. We have chosen to add a surcharge instead of an overall price increase because we believe this will be a temporary change in pricing and we will be able to remove it once the steel market stabilizes. All orders submitted starting **April 14th, 2021** must include the surcharge, this would also apply to previously quoted buildings.

Our goal is to continue to provide you with economically sound pricing, without compromising the quality of the materials that we are most distinguished for.

Please be assured that this is not a profitable advancement by us, and that it's a necessary measure to accommodate the industry-wide fluctuating steel market costs.

We will continue to closely monitor the steel markets and make adjustments as needed. We thank you for your continued support and patience as we navigate uncharted waters and challenges in our industry.

At the current rate at which prices are changing, we ask that you check our online 3D Design Builder for the most up to date pricing:
